Drawings

1. Figure 1-7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claim 6 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 5. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

4. Claim 7 is provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 13 of copending Application No. 09/884256. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1, 2, 4, 7 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Birru.

Birru discloses a two-stage equalizer for trellis coded systems comprising the following claimed limitations:

in claim 1, “an adaptive equalizer for generating an error signal” (Figure 9, output signal of 730), “a trellis decoder having an input port for accepting an input signal and an output port for providing an output signal” (250), “a decision feedback equalizer, and wherein the signal passes through the decision feedback equalizer before it is subtracted from the output signal” (720), “an FIR filter, and wherein the input signal passes through the FIR filter before it is input to the trellis decoder” (710);

in claims 7 and 8, “an adaptive equalizer wherein an error signal” (Figure 14, 15, e_k) “is generated using only an FIR filter” (710), “a trellis decoder” (250), “a mapper” (1550), “and a decision feedback equalizer” (1520).

Allowable Subject Matter

7. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Claim 5 is allowed.

9. The following is a statement of reasons for the indication of allowable subject matter: Prior art of record, taken individually or collectively, fails to disclose an adaptive equalizer which incorporates "a mapper, and wherein the output signal is mapped and scaled by the mapper before it is provided to the decision feed equalizer" in the manner as claimed.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Smith et al disclose a modem comprising a training decoder wherein the output sequences of the decoder is compared against the desired received sequences in order to trigger error procedures.
